# Command T User Testing Analysis

Users were able to...

The 3 lowest features were:

1. Modify contents of notes (0.78%)
2. Add new task into a todo list (0.78%)
3. Delete a todo list (0.73%)

Comments from participants:

Deleting the clicked folder leads the user to blank page.
I could not delete a todo list.... It seems to have some bugs still but I love it
i think 'sign in with google' was not working, and i guess this experience was okay other than that issue
It would be helpful if there is a function that introduce the steps
Whenever I tried to modify the new note, I could only type one letter in the body of the text and the rest of the typings were recorded in the title. However, the copy and paste worked so if I wanted to type something new I would have to write it first somewhere else and paste it to the body of the text. Also, all of the features in the notes(starting from H1 to Italic, bold stuff)did not work in mine Also, maybe changing gate order of the bookmarks or the widgets should be in Edit Layout section..? maybe..? because as I tried to play with it, it seems to have only deleting function.. Or the name should be Delete Bookmarks instead of Edit Layout I guess :) Overall it was really Interesting :)))))))

(1) typing in notes/todo list was difficult because the cursor can only click on the first line of the note
(2) not sure what h1, h2, h3 etc is all about
(3) 'search background' was a bit weird, i spent a minute trying to figure out how to upload my own image, it would be nice if you could prompt us to type a keyword in the text box
(4) can't delete anything off to-do list
(5) to-do list renaming is not clear; just a bit of luck that i tried double-clicking
(6) "edit layout" is really just "delete bookmarks/folders"
(7) meaningful thumbnails don't appear for bookmarks that i add -- just an 'error' thumbnail
(8) if i double-click on a note in the list, to try to rename, then when i click on "add a new list" nothing happens. it should back out of the renaming process and help me add a new list.
(9) if you have a white background, the clouds don't show up very well in the weather widget
(10) to-do list is a bit buggy because the changes that i make to the to-do list don't actually show up in the thumbnail on the 'desktop' (same with "notes")
(11) adding folder, you have to click "save"... hitting "enter" doesn't do anything and it's a bit confusing what just happened

i really like the click-and-drag between folders, though, that's pretty cool!

Additional Features that participants wanted:

- Group Message (team based)
- Maybe include automatic searching system. (자동검색) or can see the previous searching lists.
- Helpfunction
- Maybe can change icon design, too?
- Image storage
- When adding the todo list it may be better to have an icon or something similar to it instead of just clicking the background (or add new by pressing enter at the end of the previous line of todo list- like some other apps provide) because at first I did not know how to add some new things and as wondering how I shall add the todos
- Spotify or Youtube playlist integration? Google calendar integration?

Full result from this testing can be found here:
